

# Why Radbot isn't IoT...or is it?

# The Problem

- 17% of the UK's emissions are from space heating – that's more than cars!
- Much of this is unnecessary...UK households waste £2.2 billion each year heating their homes when they don't need to
- The UK will not meet its climate change targets without a revolution in home heating. The CCC says a 15% reduction is required through energy efficiency improvements

Vestemi, maker of Radbot, is a technology company with an environmental & social purpose. Our vision is to create simple, effective consumer products that reduce energy consumption and save people money

# Our Solution

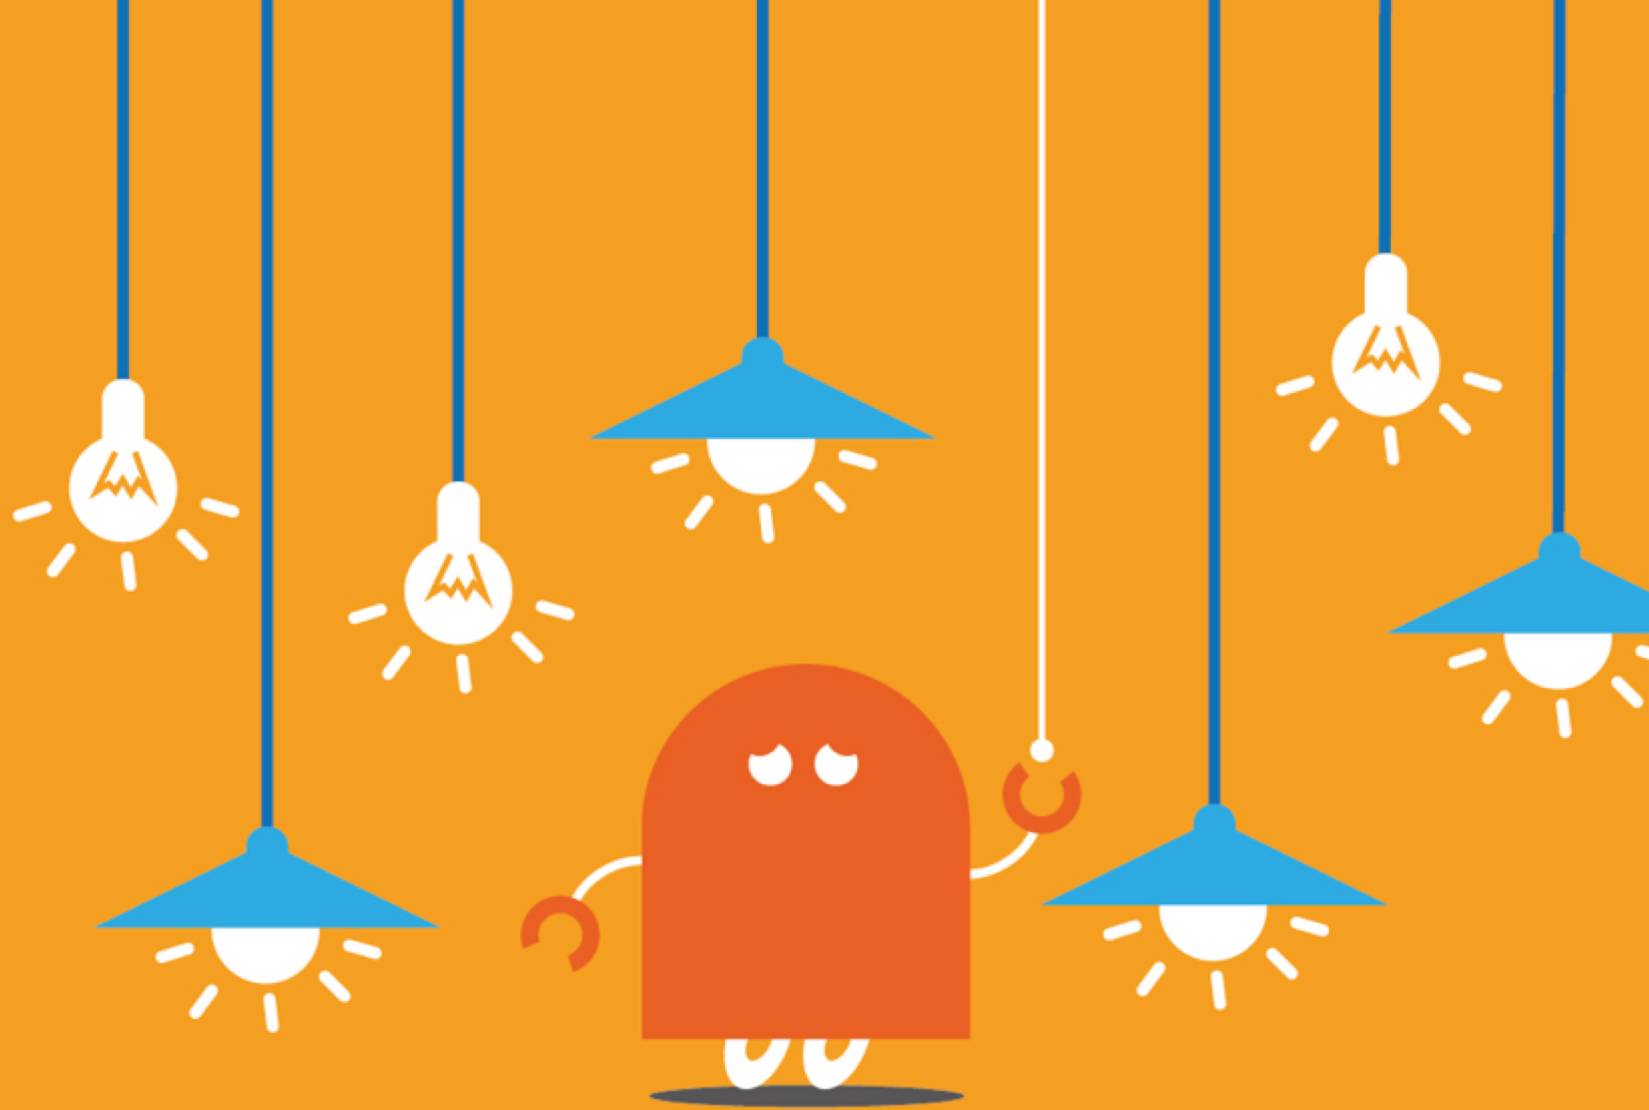

Radbot is a smart heating control proven to save up to 30% off heating bills by heating each room only when you need it

[Watch the video to see how it works](#)

You wouldn't  
turn all the  
lights in your  
house on and  
off with one  
switch...

So why do it  
with your heating?

# Why Radbot is NOT IoT...

- 1) No app or remote control
- 2) Works without comms
- 3) Not aimed at early adopters

Why are you any different?

All the benefits without the complications...

No app

No Wi-Fi

Self-install

# Why Radbot IS IoT

---

- 1) Works with comms
- 2) Uses sensors & local intelligence
- 3) Consumer-friendly (if done right!)

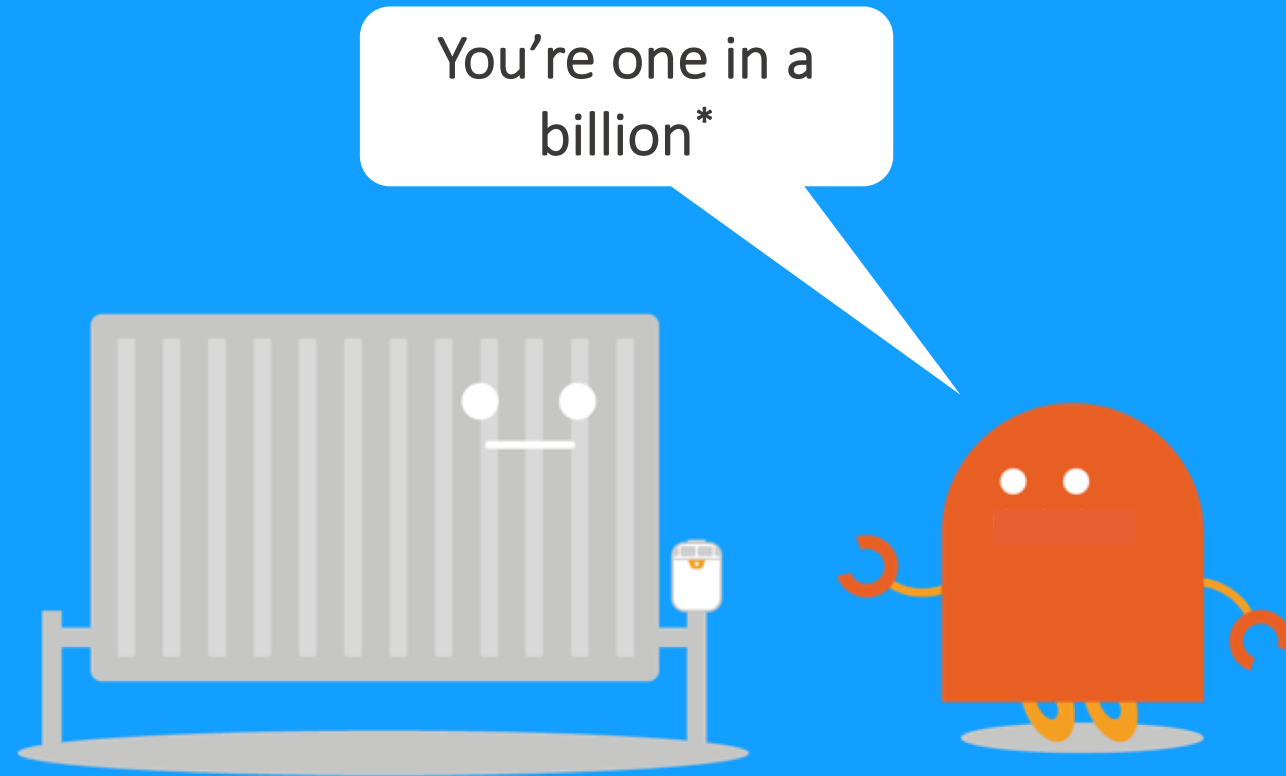

Radbot isn't IoT...or is it?

# Where we are today

---

- 1) Just closed successful fundraise
- 2) Perfecting our algorithm
- 3) Huge market opportunity

\*Number of radiators in UK/EU homes
